MEMORANDUM FOR: Assistant for Plans and Development

ATTENTION :

SUBJECT : Possible Modification of Six Additional Zoom 70's

1. As indicated in a memo dated 17 June 1966 (NPIC/PD 114-66), the dovetail-rhomboid modification has recently been completed on 8 PD Zoom 70 microstereoscopes.

2. The division has 6 other Zoom 70's and would like to know whether or not it would be feasible to have them modified at this time. Two are instruments that were loaned to the division by  some years ago and which he now indicates may be retained permanently. Two others are instruments delivered from the factory this year; the division understood these would come equipped with dovetail rhomboids but they did not. The other two are instruments which are receiving greatly increased use in the model shop.
